

## **TRANSPORT/REFERRALS**

### **Supporting information**

#### **Does the duration of neonatal transport have an impact on mortality?**

A cohort study involving 4,966 neonates (Mori, 2007) found that those transported for > 90 min experienced more than twice the mortality of those transported for between 30 and 59 min (RR 2.26; 95% CI 1.26 - 4.04).
